DESIGN THINKING AND DIDACTIC MATERIAL DEVELOPMENT (DTMD 5312)

Faculty: Education

Department: Didactics

Option: MCs

Module Leader: Etienne NTAMBARA, Ass. Lecturer

Assignment

Maximum Marks: 60

Group assignment: Using the created groups

Date: 17th January 2026

Presentation and submission Day: the last 8 hours of our final class (week of 23rd up to 31st March 2026).

Maximum presentation time: 30 minutes + Question and Answers

Members Group No: 5 as example

Regno	First Name	Last Name	Marks /60

MARKING SCHEME CHECKLIST (Total = 60 Marks)

Section	**No**	**Criteria**	**Checklist Items**	**Marks**

Project Implementation	1	Functionality & Logic	✓ System solves a real-world problem ✓ All features work correctly (CRUD, login, roles >=3 different roles)	……/10
Project Implementation	2	Database Design & Security	✓ Proper database structure (≥ 3 tables) ✓ Use of PDO prepared statements ✓ Password hashing implemented correctly	……/10
Project Implementation	3	User Interface & Responsiveness	✓ Clean design ✓ Responsive (mobile + desktop) ✓ Easy navigation	……/10
Deployment (Hosting)	4	GitHub Repository	✓ Project pushed to GitHub (https://github.com/) ✓ All project files and database included	……/5
Deployment (Hosting)	5	Live Deployment	✓ Project deployed on InfinityFree (https://dash.infinityfree.com) ✓ System runs without errors	……/5
Project Presentation	6	System Demonstration	✓ Clear explanation of features ✓ Live demo works correctly	……/8

Project Presentation	7	Understanding & Communication	✓ Student explains code and logic clearly ✓ Answers questions confidently	……/8
PDF Report	8	Report Quality	✓ Well-structured and documented report (problem, solution, screenshots)	……/4
TOTAL				**……/60**

Submission Files (User-Based & Activity-Focused Version)

Project Report Requirements

Each group must submit a well-structured project report (PDF format) that clearly explains how the system works for different users.

User Accounts & Access

- Clearly list all system users (minimum 3 roles), for example:
  - Admin
  - Staff
  - Customer / Student
- For each user, provide:
  - Username

    - Password *(for testing purposes only)*
    - Role description (what the user is allowed to do)

User Activities & System Functionalities

- The report must include screenshots of all key functionalities for some of user role (Especially Admin), such as:
    - Create
    - Read
    - Update
    - Delete
    - Activate / Deactivate *(if applicable)*

This means:

- Show what Admin can do
- Show what Staff can do
- Show what User/Customer can do

Screenshot Explanation

For each screenshot, include a short explanation (maximum 3 sentences):

- What the feature does
- How the user performs the action
- Expected result/output

Source Code Submission (GitHub)

- Provide one GitHub repository link per group
- The repository must include:
    - All source code (PHP, HTML, CSS/Bootstrap)
    - Database file (.sql)

    - All required assets (images, scripts, styles)

The project must be:

- Well organized
- Clearly structured (folders, naming)

Proof of Repository

- Include a screenshot of the GitHub repository showing:
    - Project files
    - Folder structure
    - Evidence that the work belongs to your group

Important Notes

- Missing user accounts or roles → marks deducted (-1 mark)
- Missing user activities (CRUD for Admin) → marks deducted (-1 mark)
- Missing screenshots → marks deducted (-1)
- Missing GitHub link or InfinityFree link → submission incomplete (-1 mark)
- Incomplete repository (no SQL or missing files) → marks deducted (-1 mark)

Key Idea (Very Important for Students)

Your report must clearly answer this question:

"What can each user do in your system?"
